Abstract. The new ctenid genus *Afroneutria* is proposed to include five species: *Afroneutria velox* (Blackwall, 1865) comb. nov. (type species), *A. immortalis* (Arts, 1912) comb. nov., *A. erythrochelis* (Simon, 1876) comb. nov., *A. quadrimaculata* sp. nov. and *A. hybrida* sp. nov., all collected in central to southeast Africa. *Afroneutria* species can be distinguished from the remaining Ctenidae by the presence of a synapomorphic laminar projection on the embolus tip. The genus can also be distinguished by the presence of the following set of characters: elongated cup-shaped median apophysis and elongated and laminar embolus on the male palp; large lateral projections on the epigynum and the spermathecae divided into two parts, dorsal and ventral, in the vulva.

Keywords. Africa, *Ctenus*, systematics, taxonomy

Polotow D. & Jocqué R. 2015. *Afroneutria*, a new spider genus of Afrotropical Ctenidae (Arachnida, Araneae). *European Journal of Taxonomy* 121: 1–27. <http://dx.doi.org/10.5852/ejt.2015.121>

Introduction

Ctenidae Keyserling, 1877 is composed of nocturnal and cursorial spiders, common in the lower strata of tropical forests of South and Central America, Asia and Africa. To date, the family comprises 491 species, distributed in 40 genera (World Spider Catalog 2014). Currently, most of the Ctenidae species are placed in the genus *Ctenus* Walckenaer, 1805. Based on a new diagnosis and recent cladistic analysis, *Ctenus* is considered polyphyletic as currently delimited (Silva 2003; Simó & Brescovit 2001; Brescovit & Simó 2007; Polotow & Brescovit 2009, 2014).

According to the phylogenetic hypothesis proposed by Polotow & Brescovit (2014), several *Ctenus* species need to be allocated to new genera, including a clade formed by *Ctenus velox* Blackwall, 1865, *C. immortalis* Arts, 1912 and *C. erythrochelis* Simon, 1876. They appear as a well-supported group, not related to the type species of the genus, *Ctenus dubius* Walckenaer, 1805 (Polotow & Brescovit 2014: fig. 3, clade D).

The aim of this paper is to establish the new Afrotropical ctenid genus *Afroneutria* to accommodate five species: *Afroneutria velox* (Blackwall, 1865) comb. nov. (type species), *A. immortalis* (Arts, 1912) comb. nov., *A. erythrochelis* (Simon, 1876) comb. nov., *A. quadrimaculata* sp. nov. and *A. hybrida* sp. nov., all collected in central and East Africa. We also reestablish *A. immortalis* comb. nov., previously considered a synonym of *A. velox* comb. nov.

Material and methods

Morphological observations and illustrations were made using a Wild M10 and a Wild M5 stereo microscope. The epigynum was detached from the abdomen and submerged in methyl salicylate to clear the internal structures. For SEM, specimens were cleaned ultrasonically, dried through critical point, gold coated, and then examined and photographed with a JEOL 6480 LV scanning electron microscope at the Royal Museum for Central Africa, Tervuren, Belgium (MRAC). All measurements are in millimeters.

The following abbreviations are used below:

ALE	=	anterior lateral eyes
AME	=	anterior median eyes
C	=	conductor
CD	=	copulatory ducts
Cy	=	cymbium
d	=	dorsal
E	=	embolus
FD	=	fertilization ducts
LL	=	locking lobes
LS	=	lateral sector
MA	=	median apophysis
MS	=	median sector
p	=	prolateral
PLE	=	posterior lateral eyes
PME	=	posterior median eyes
r	=	retrolateral
RTA	=	retrolateral tibial apophysis
S	=	spermathecae
Te	=	tegulum
Ti	=	tibiae
v	=	ventral

The material examined is deposited in the following institutions (curator in parentheses):

BMNH	=	The Natural History Museum, London (J. Beccaloni)
MNHN	=	Muséum National d'Histoire Naturelle, Paris (C. Rollard)
MRAC	=	Royal Museum for Central Africa, Tervuren (R. Jocqué)
OUMNH	=	Oxford University Museum of Natural History (Z. Simmons)
ZMB	=	Zoological Museum of Berlin (J. Dunlop)
ZMUC	=	Zoological Museum, University of Copenhagen (N. Scharff)

Results

Class Arachnida Cuvier, 1812
Order Araneae Clerck, 1757
Family Ctenidae Keyserling, 1877
Subfamily Cteninae Keyserling, 1877

Genus *Afroneutria* gen. nov.

[urn:lsid:zoobank.org:act:59ECDA85-C86E-416E-A98D-CB1DD6AB5DA1](https://zoobank.org/urn:lsid:zoobank.org:act:59ECDA85-C86E-416E-A98D-CB1DD6AB5DA1)

Type species

Ctenus velox Blackwall, 1865. Designated here.

Diagnosis

Afroneutria species can be distinguished from the remaining Ctenidae by the presence of a synapomorphic laminar projection on the embolus tip (Fig. 1B; Polotow & Brescovit 2014: character 25, fig. 3). The genus can also be distinguished from the remaining Cteninae spiders by the presence of the following set of characters: elongated cup-shaped median apophysis and elongated and laminar embolus on the male palp (Fig. 1A–B); large lateral projections on the epigynum and the spermathecae divided into two parts, dorsal and ventral, in the vulva (Fig. 1C).

Etymology

The generic name is a combination of the first part of Afrotropical and the last part of *Phoneutria* Perty, 1833, a Neotropical genus that bears superficial similarities with the genus described here. The gender is feminine.

Description

Ecribellate ctenids. Total body length (males and females) 12.40–32.00. Carapace piriform (Fig. 2A, C), brown, covered by white hairs in longitudinal median area and in lateral area; tuft of long white hairs between PME; border with white hairs; thoracic groove longitudinal, in posterior third; except *A. erythrochelis* comb. nov., which is covered by golden hairs. Chilum divided. Clypeus with long erect black bristles. Ctenid eye pattern 2-4-2, with anterior and posterior row recurved in dorsal view. Eyes round, except oval anterior lateral eyes. Chelicerae dark brown, covered by white hairs (except *A. erythrochelis* comb. nov., covered with golden hairs); promargin with three teeth, the median higher than the laterals; retromargin with four similar sized teeth; prominent basal condyle; intermarginal denticles present only in *A. immortalis* comb. nov. and *A. hybrida* sp. nov. Endites reddish brown with lighter apical area, external lateral margin excavated, distally bearing dense apical scopulae and subapical serrula. Labium dark brown, distally rounded, bearing dense apical scopula. Sternum reddish brown, oval, not extending between coxae IV. Legs reddish brown. Male legs more elongated and slender than female legs. Trochanter notched. Tarsus with claw tufts (Fig. 1D–F) composed of tenent setae, specialized in adhesion to smooth surfaces (Ramírez 2014). Abdomen oval, with tufts of white hairs and numerous black setae on anterior dorsal area (Figs 2A–D, 4A–D, 6A–D, 8A–D, 10A–B). Males and females with specific ventral coloration pattern on abdomen (Figs 2B, D; 4B, D; 6B, D; 8B, D; 10B). Male palp (Figs 1A–B, 3A–C, 5A–C, 7A–B, 9A–C, 11A–B, 13A–D, 14A–B, 15A–D): tibia with short VTA; short RTA with three projections, except *A. erythrochelis* comb. nov. with two projections and *A. hybrida* sp. nov. with truncated tip; cymbium with elongated tip; subtegulum prolateral, except *A. erythrochelis* comb. nov. with retrolateral subtegulum; tegulum oval; median apophysis cup-shaped and elongated; embolus elongated with retrolateral area hyaline and complex tip; locking lobes present; conductor short and partially sclerotized. Epigynum (Figs 3D–E, 5D–E, 7C–D, 9D–E, 12A–D): divided in median field and two lateral fields; median field with anterior area narrow and posterior area swollen and large; lateral

Fig. 1. *Afroneutria velox* (Blackwall, 1865) comb. nov.. — A–B. Male palp, ventral view. — C–F. ♀. C. Epigynum, dorsal view. D–F. Tarsus, lateral view. D. Leg III. E. Leg I. F. Leg IV. Scale bars = 200 µm.

field with lateral projections; lateral projections covering part of median field; copulatory opening with lighter area; spermathecae divided in two parts, ventral and dorsal; copulatory duct ending in ventral part; fertilization duct arising of dorsal part (Figs 1C, 3D–E, 5D–E, 7C–D, 9D–E).

Composition

Five species: *Afroneutria velox* comb. nov., *A. immortalis* comb. nov., *A. erythrochelis* comb. nov., *A. quadrimaculata* sp. nov. and *A. hybrida* sp. nov.

Distribution

Central and southeast Africa (Figs 16A–B).

Afroneutria velox (Blackwall, 1865) comb. nov.
Figs 1A–F, 2A–D, 3A–E, 12D, 13A–B, 16A

Phoneutria melanogastra Bösenberg & Lenz, 1895: 36, pl. 1, fig. 14.

Ctenus marshalli F.O. Pickard-Cambridge, 1898: 26, pl. 4, figs 12–13.

Ctenus velox – F.O. Pickard-Cambridge 1898: 15, pl. 3, figs 1–2. — Benoit 1977: 700, fig. 2a–d.

Ctenus melanogaster – Strand 1907: 694. — Arts 1912: 196, pl. 1, fig. 14a–b. — Benoit 1977: 700, fig. 2a–d (synonymised with *C. velox*).

Ctenus melanogastra – Hyatt 1954: 884.

Ctenus marshalli – Hyatt 1954: 884 (synonymised with *C. melanogaster*).

Note

Blackwall (1865) indicated one female as the type material used in the description of *Ctenus velox*, but two adult females were found in the OUMNH collection and, according to the label, both were designated as types. Based on the original description we here designate the smaller specimen as the lectotype and the other female as the paralectotype.

Diagnosis

The males of *Afroneutria velox* comb. nov. differ from males of the other species of the genus by the laminar and truncated tip and the additional subdistal projection of the embolus (Fig. 1B) and the shape of the RTA (Fig. 3A–C). The females can be distinguished from the remaining species of the genus by the acuminate and short lateral projections of the epigynum and rounded dorsal spermathecae in the vulva (Fig. 3D–E).

Material examined

Type material

MOZAMBIQUE: *Ctenus velox*, female lectotype (designated here), 1 female paralectotype, next to confluence of Shiré River with Zambezi River (approximate coordinates: 17°40'24.0" S, 35°17'51.2" E), OUMNH 1554.

Type material not examined

EAST AFRICA: *Phoneutria melanogastra*, 2 male syntypes, 1 female syntype, deposited in Zoologisches Museum Hamburg.

ZIMBABWE: *Ctenus marshalli*, holotype, ♂, Umfuli River, also known as Mupfure River (approximate coordinates: 17°55'13.3" S, 29°56'40.7" E), Mashonaland, BMNH.

Description

Male (MRAC 155299)

Total length 12.30. Carapace 6.20 long and 4.60 wide. Eye diameter: AME 0.32, ALE 0.18, PME 0.60, PLE 0.56. Leg measurements: I: femur 8.40 / patella 3.20 / tibia 8.70 / metatarsus 8.60 / tarsus 3.30 / total 32.20; II: 8.10 / 3.30 / 7.40 / 7.60 / 2.80 / 29.20; III: 6.80 / 2.60 / 5.70 / 6.40 / 2.30 / 23.80; IV: 9.30 / 2.60 / 8.90 / 11.10 / 3.30 / 35.20. Leg formula 4123. Leg spination: tibia I and II v2-2-2-2, r1-1, p1-1; III and IV v2-2-2, r1-1, p1-1; metatarsus I, II and III v2-2-2, p1-1-1, r1-1-1; IV v1-1-1-1-1-2, r1-1-1, p1-1-1. Coloration: venter of abdomen black, with two white spots placed transversely behind epigastric furrow (Fig. 2B). Palp: cymbium elongated, longer than tibia; conductor rectangular; median apophysis slightly curved (Figs 1A–B, 3A–C, 13A–B).

Female (MRAC 173465)

Total length 18.60. Carapace 8.10 long and 6.40 wide. Eye diameter: AME 0.36, ALE 0.24, PME 0.60, PLE 0.48. Leg measurements: I: femur 6.80 / patella 3.10 / tibia 6.30 / metatarsus 6.00 / tarsus 2.20 / total 24.40; II: 6.30 / 2.90 / 5.40 / 5.50 / 2.10 / 22.20; III: 5.20 / 2.30 / 4.50 / 5.10 / 2.10 / 19.20; IV: 7.50 / 2.60 / 6.60 / 8.40 / 2.30 / 27.40. Leg formula 4123. Leg spination: tibia I and II v2-2-2-2, r0, p0; III and IV v2-2-2, r1-1, p1-1; metatarsus I and II v2-2-2, r0, p0; III v2-2-2, r1-1-1, p1-1-1; IV v1-1-1-1-1-2, r1-1-1, p1-1-1. Coloration: ventral abdomen black, with two white spots placed transversely behind epigastric furrow (Fig. 2C–D). Epigynum: triangular median field and short lateral projections of lateral fields of epigynum (Fig. 3D). Dorsal spermathecae short and round; ventral spermathecae with rebordered lateral margins (Figs 1C, 3E, 12D).

Variation

Two ♂♂: total length 10.60–12.40, carapace length 6.00–6.30, femur I length 7.10–8.70. Three ♀♀: total length 16.40–18.70, carapace length 7.00–8.10, femur I length 6.20–6.50. At least two ♂♂ present venter of abdomen black in front, red towards back, with two spots placed transversely behind epigastric furrow.

Distribution

Tanzania, Malawi, Mozambique, Democratic Republic of the Congo and Zimbabwe (Fig. 16A).

Afroneutria immortalis (Arts, 1912) revalidated, comb. nov.

Figs 4A–D, 5A–E, 12A, 14A–B, 16A

Ctenus immortalis Arts, 1912: 202, pl. 2, fig. 25.

Ctenus velox – Benoit 1977: 700, fig. 2a–d (misidentified and wrongly synonymised with *C. immortalis*).

Ctenus immortalis – Polotow & Brescovit 2014: 335, 338, 348, 355.

Fig. 4. *Afroneutria immortalis* (Arts, 1912) comb. nov. Habitus. A. ♂, dorsal view. B. ♂, ventral view. C. ♀, dorsal view. D. ♀, ventral view. Scale bars = 2 mm.

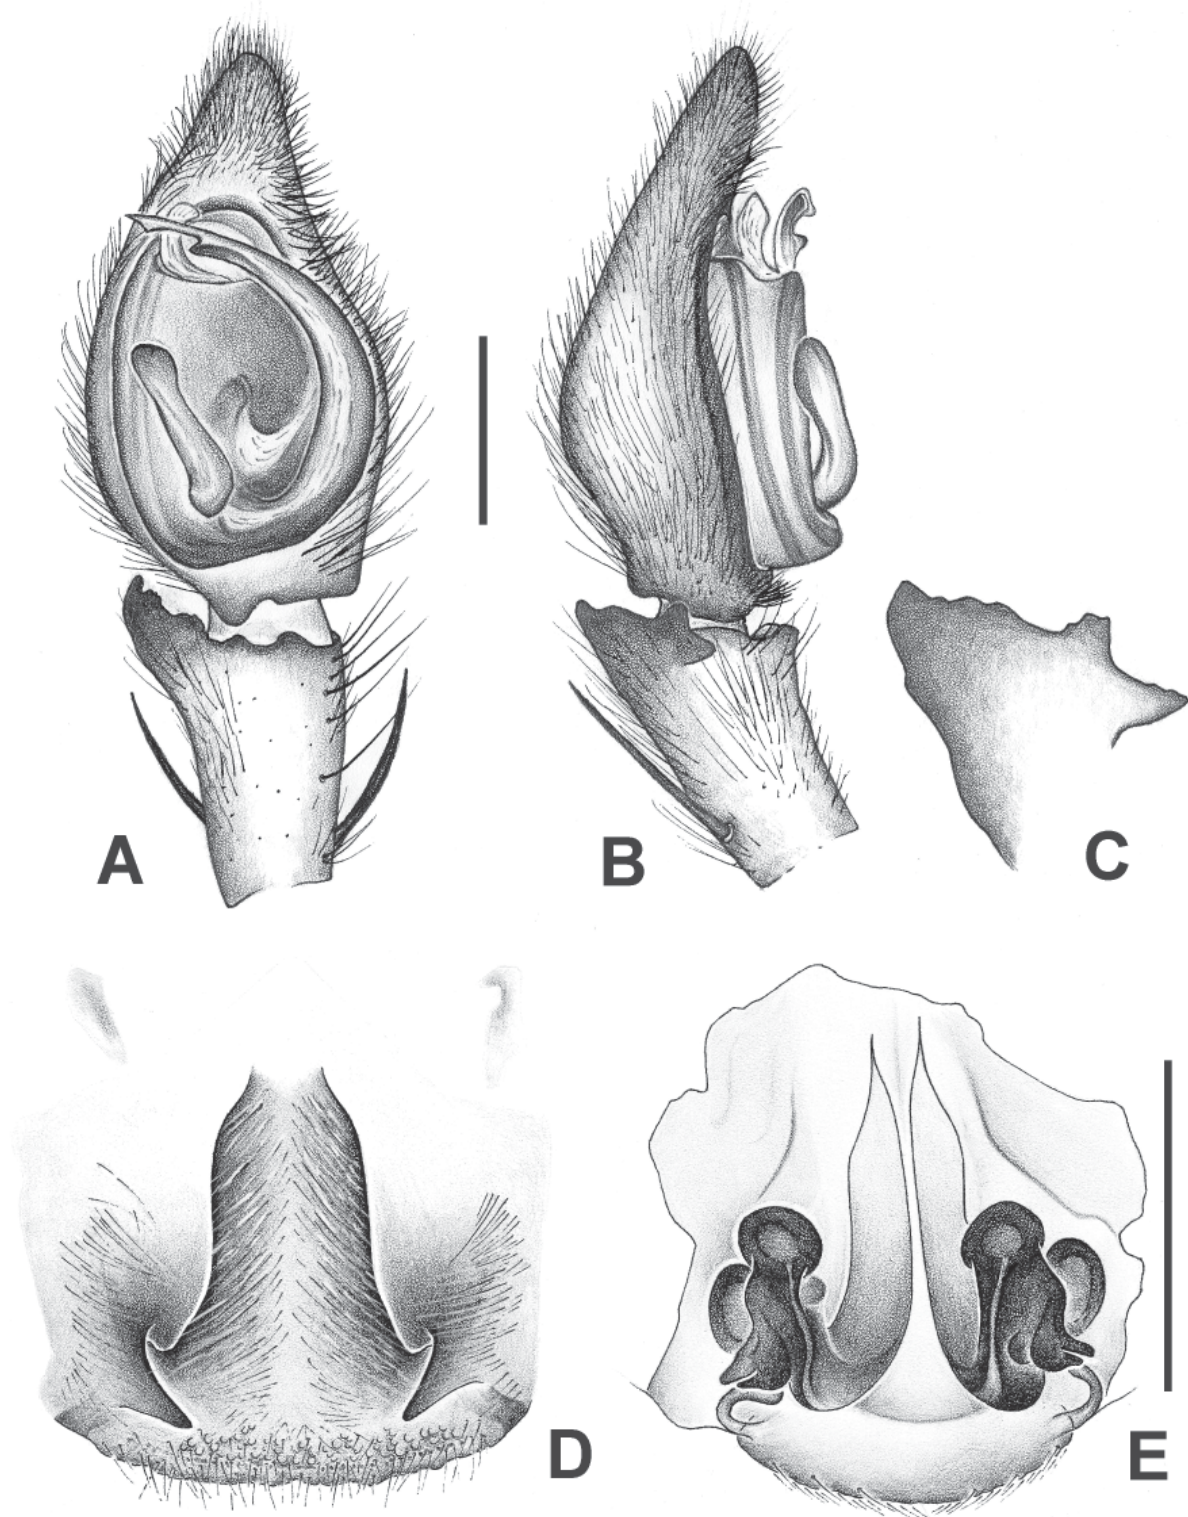

Fig. 5. *Afroneutria immortalis* (Arts, 1912) comb. nov. — **A–C.** Male palp. **A.** Ventral view. **B.** Retrolateral view. **C.** Retrolateral tibial apophysis, lateral view. — **D–E.** Female genitalia. **D.** Epigynum, ventral view. **E.** Vulva, dorsal view. Scale bars = 1 mm.

Diagnosis

The males of *Afroneutria immortalis* comb. nov. differ from those of the other species of the genus by the elongated tip and short additional laminar projection of the embolus on the male palp (Figs 5A, 14A; Polotow & Brescovit 2014: fig. 8f, indicated by an arrow) and the shape of the RTA (Fig. 5C; Polotow & Brescovit 2014: fig. 8d). The females can be distinguished by the acute lateral spurs (Figs 5D, 12A) and straight dorsal and ventral spermathecae with a swollen apical area (Fig. 5E).

Material examined

Type material

TANZANIA: *Ctenus immortalis*, 1 syntype, ♂, Langenburg (currently Tukuyu), Fülleborn coll., ZMB 9884; syntypes, ♀♀, Dar-es-Salam, Stuhlmann coll., ZMB 9883; syntypes, ♀♀, Dar-es-Salam, Regner coll., ZMB 9881.

(ZMUC); Coast Province, Mafia Island, 7°53' S, 39°50' E, 2 ♀♀, Oct.–Nov. 1990, Frontier Tanzania coll. (ZMUC).

Description

Male (MRAC 213883)

Total length 13.40. Carapace 7.20 long and 5.60 wide. Eye diameter: AME 0.32, ALE 0.18, PME 0.60, PLE 0.56. Leg measurements: I: femur 8.60 / patella 3.40 / tibia 8.90 / metatarsus 8.90 / tarsus 3.40 / total 33.20; II: 8.10 / 3.30 / 7.40 / 7.60 / 2.80 / 29.20; III: 6.80 / 2.60 / 5.70 / 6.40 / 2.30 / 23.80; IV: 9.50 / 2.80 / 9.10 / 11.30 / 3.50 / 36.20. Leg formula 4123. Leg spination: tibia I and II v2-2-2-2, r1-1, p1-1; III and IV v2-2-2, r1-1, p1-1; metatarsus I, II and III v2-2-2, p1-1-1, r1-1-1; IV v1-1-1-1-1-2, r1-1-1, p1-1-1. Coloration: venter of abdomen black, with two white spots in front of spinnerets (Fig. 4B). Palp: cymbium elongated, longer than tibia; conductor triangular; median apophysis slightly curved, with acute tip (Figs 5A–C, 14A–B).

Female (MRAC 211539)

Total length 16.40. Carapace 7.00 long and 5.40 wide. Eye diameter: AME 0.36, ALE 0.24, PME 0.60, PLE 0.48. Leg measurements: I: femur 6.80 / patella 3.00 / tibia 6.40 / metatarsus 6.00 / tarsus 2.20 / total 24.40; II: 6.30 / 2.90 / 5.40 / 5.50 / 2.10 / 22.20; III: 5.20 / 2.40 / 4.40 / 5.10 / 2.00 / 19.10; IV: 7.50 / 2.60 / 6.60 / 8.40 / 2.30 / 27.40. Leg formula 4123. Leg spination: tibia I and II v2-2-2-2, r0, p0; III and IV v2-2-2, r1-1, p1-1; metatarsus I and II v2-2-2, r0, p0; III v2-2-2, r1-1-1, p-1-1-1; IV v1-1-1-1-1-2, r1-1-1, p1-1-1. Coloration: venter of abdomen black, with two white spots in front of spinnerets (Fig. 4D). Epigynum: triangular median field and elongated lateral projections of lateral field (Figs 5D, 12A). Dorsal and ventral spermathecae elongated (Fig. 5E).

Variation

Six ♂♂: total length 10.40–13.60, carapace length 5.30–7.20, femur I length 4.70–8.10. Two ♀♀: total length 15.70–16.40, carapace length 7.00–7.60, femur I length 6.80–7.90. Several ♀♀ with four white spots on venter of abdomen, two behind epigastric furrow, two in front of spinnerets.

Distribution

Kenya and Tanzania (Fig. 16A).

Afroneutria erythrochelis (Simon, 1876) comb. nov.

Ctenus erythrochelis – Simon 1897: 107, figs 98, 101. — Lessert 1915: 44, pl. 2, fig. 33.

Phoneutria auricularis – Arts 1912: 188, pl. 1, fig. 1.

Ctenus johnstoni – Arts 1912: 188, pl. 1, fig. 1.

Ctenus carsoni – Arts 1912: 188, pl. 1, fig. 1.

Ctenus aureopubescentis – Benoit 1977: 698, figs 1a–d.

Diagnosis

The males of *Afroneutria erythrochelis* comb. nov. differ from those of the other species of the genus by the swollen retrolateral area of the cymbium, the curved median apophysis, the retrolateral base of the embolus and by the laminar projection of the embolus extending beyond its tip (Figs 7A–B, 15C–D). The females can be distinguished by the short lateral projections of the epigynum and the dorsal spermathecae curved ventrally, forming a spiral in the vulva (Figs 7C–D, 12C).

Type material not examined

MALAWI: *Ctenus johnstoni*, holotype, ♀, Zomba, Lake Nyassa, BMNH.

KENYA and DEMOCRATIC REPUBLIC OF THE CONGO: *Ctenus carsoni*, syntypes, 3 ♂♂, Mombasa and Nyanza Province (Kenya) and Kavala Island, Lake Tanganyika (Democratic Republic of the Congo), Carson coll., Pasha coll., BMNH.

GHANA: *Ctenus aureopubescens*, holotype, ♂, probably ZMB, not found.

Description

Male (MRAC 60880)

Total length 29.10. Carapace 15.10 long and 11.45 wide. Eye diameter: AME 0.55, ALE 0.25, PME 0.72, PLE 0.66. Leg measurements: I: femur 16.30 / patella 6.80 / tibia 16.10 / metatarsus 15.90 / tarsus 4.40 / total 59.50; II: 14.30 / 6.30 / 12.40 / 14.10 / 4.20 / 51.30; III: 11.50 / 5.20 / 8.80 / 10.70 / 3.40 / 39.60; IV: 15.80 / 5.70 / 13.70 / 17.45 / 4.20 / 56.85. Leg formula 1423. Leg spination: tibia I and II v2-2-2-2, r1-1, p1-1; III and IV v2-2-2, r1-1, p1-1; metatarsus I, II and III v2-2-2, p1-1-1, r1-1-1; IV v1-1-1-1-2, r1-1-1, p1-1-1. Legs covered by long, golden hairs (Fig. 6A–B). Palp: cymbium elongated, almost as long as tibia; conductor rectangular, curved; median apophysis drop-shaped, curved at base (Figs 7A–B, 15C–D).

Female (MRAC 2178)

Total length 32.00. Carapace 16.80 long and 12.96 wide. Eye diameter: AME 0.55, ALE 0.25, PME 0.70, PLE 0.65. Leg measurements: I: femur 15.35 / patella 7.50 / tibia 13.90 / metatarsus 13.75 / tarsus 4.40 / total 54.90; II: 14.25 / 6.60 / 11.60 / 12.20 / 3.80 / 48.45; III: 11.20 / 5.50 / 8.30 / 10.20 / 3.50 / 38.70; IV: 15.00 / 6.10 / 12.20 / 15.65 / 3.90 / 52.85. Leg formula 1423. Leg spination: tibia I and II v2-2-2-2, r0, p0; III and IV v2-2-2, r1-1, p1-1; metatarsus I and II v2-2-2, r0, p0; III v2-2-2, r1-1-1, p-1-1-1; IV v1-1-1-1-2, r1-1-1, p1-1-1. Legs covered by long, golden hairs (Fig. 6C–D). Epigynum: triangular median field and short lateral projections of lateral fields (Fig. 7C, 12C). Dorsal spermathecae elongated, curved, ventral spermathecae short (Fig. 7D).

Variation

Ten ♂♂: total length 19.60–29.10, carapace length 9.50–15.10, femur I length 10.50–16.30. Ten ♀♀: total length 31.50–33.45, carapace length 14.50–18.25, femur I length 12.60–16.80.

Distribution

Angola, Burundi, Democratic Republic of the Congo, Malawi, Namibia, Republic of Congo, Rwanda, Tanzania and Zimbabwe (Fig. 16B).

Afroneutria quadrimaculata sp. nov.

[urn:lsid:zoobank.org:act:0FF06727-624D-465E-ACA1-8A9CEFB12A50](https://zoobank.org/urn:lsid:zoobank.org:act:0FF06727-624D-465E-ACA1-8A9CEFB12A50)

Figs 8A–D, 9A–E, 12B, 15A–B, 16A

Ctenus velox – Benoit 1977: 700, fig. 2a–d (misidentification).

Diagnosis

The males of *Afroneutria quadrimaculata* sp. nov. differ from those of the other species of the genus by the laminar embolus with enlarged tip and the curved, subdistal, additional projection of the embolus (Figs 9A, 15A). The females can be distinguished by the large and elongated lateral projections of the epigynum and the curved dorsal spermathecae in the vulva (Figs 9D–E, 12B).

Fig. 8. *Afroneutria quadrimaculata* sp. nov. Habitus. **A.** ♂, dorsal view. **B.** ♂, ventral view. **C.** ♀, dorsal view. **D.** ♀, ventral view. Scale bars = 2 mm.

Fig. 9. *Afroneutria quadrimaculata* sp. nov. — A–C. Male palp. A. Ventral view. B. Retrolateral view. C. Retrolateral tibial apophysis, lateral view. — D–E. Female genitalia. D. Epigynum, ventral view. E. Vulva, dorsal view. Scale bars = 2 mm.

Etymology

The specific name is derived from Latin, *quadri-* (four) and *macula-* (spot), meaning to have four spots and making reference to the four white spots on the venter of the abdomen.

Material examined

Holotype

DEMOCRATIC REPUBLIC OF THE CONGO: ♂, Jadotville, Kasompi, Katanga, Oct. 1956, Z. Bacq coll. (MRAC 90554).

Paratype

DEMOCRATIC REPUBLIC OF THE CONGO: ♀, Kisenge, Katanga, Dec. 1964, A. Regnard coll. (MRAC 127584).

Additional material

DEMOCRATIC REPUBLIC OF THE CONGO: Kasai, Bibanga, 1 ♀, 1940, M. Bequaert coll. (MRAC 21542); Katanga, Kisenge, 1 ♂, 1965, Q. Regnard coll. (MRAC 128007); Katanga, Jadotville, Kasompi, 1 ♀, Oct. 1956 (MRAC 90555); 1 ♂, 6 Oct. 1956 (MRAC 90596); Katanga, Luiswishi Forest, 1 ♀, 2 Mar. 1974, F. Malaise coll. (MRAC 149210); Katanga, L'Upemba National Park, River Lufira (680 m), 2 ♂♂, 5 ♀♀, 15 Sep. 1947, G.F. de Witte coll. (MRAC 152022).

Description

Male (MRAC 128007)

Total length 14.90. Carapace 7.50 long and 5.90 wide. Eye diameter: AME 0.36, ALE 0.24, PME 0.48, PLE 0.44. Leg measurements: I: femur 9.00 / patella 3.40 / tibia 9.10 / metatarsus 8.80 / tarsus 3.30 / total 33.60; II: 8.10 / 3.30 / 7.30 / 7.80 / 3.00 / 29.50; III: 7.00 / 2.70 / 5.50 / 6.70 / 2.50 / 24.40; IV: 9.20 / 3.10 / 8.40 / 10.90 / 3.30 / 34.90. Leg formula 4123. Leg spination: tibia I and II v2-2-2-2, r1-1, p1-1; III and IV v2-2-2, r1-1, p1-1; metatarsus I, II and III v2-2-2, p1-1-1, r1-1-1; IV v1-1-1-1-1-2, r1-1-1, p1-1-1. Coloration: venter of abdomen black with four white spots, two behind epigastric furrow, two in front of spinnerets (Fig. 8B). Palp: cymbium slightly longer than tibia; conductor oval; median apophysis curved (Figs 9A–C, 15A–B).

Female (MRAC 90555)

Total length 20.10. Carapace 9.50 long and 7.40 wide. Eye diameter: AME 0.44, ALE 0.28, PME 0.56, PLE 0.52. Leg measurements: I: femur 8.70 / patella 4.40 / tibia 8.20 / metatarsus 7.60 / tarsus 2.70 / total 31.60; II: 7.80 / 4.10 / 6.80 / 6.70 / 2.70 / 28.10; III: 6.80 / 3.20 / 5.50 / 6.30 / 2.40 / 24.20; IV: 9.00 / 3.70 / 8.00 / 10.20 / 3.10 / 34.00. Leg formula 4123. Leg spination: tibia I and II v2-2-2-2, r0, p0; III and IV v2-2-2, r1-1, p1-1; metatarsus I and II v2-2-2, r0, p0; III v2-2-2, r1-1-1, p-1-1-1; IV v1-1-1-1-1-2, r1-1-1, p1-1-1. Coloration: as in male (Fig. 8C–D). Epigynum: with triangular median field and elongated lateral projections of lateral fields (Figs 9D, 12B). Dorsal spermathecae long, curved, ventral spermathecae short (Fig. 9E).

Variation

Six ♂♂: total length 15.00–14.10, carapace length 7.50–7.40, femur I length 9.00–7.70. Ten ♀♀: total length 24.20–16.50, carapace length 10.00–8.10, femur I length 8.90–7.50.

Distribution

Democratic Republic of the Congo (Fig. 16A).

Afroneutria hybrida sp. nov.

[urn:lsid:zoobank.org:act:425F304C-8F67-4DFA-A475-A3E3115CFEB8](https://zoobank.org/urn:lsid:zoobank.org:act:425F304C-8F67-4DFA-A475-A3E3115CFEB8)

Figs 10A–B, 11A–C, 13C–D, 16B

Diagnosis

The males of *Afroneutria hybrida* sp. nov. differ from those of the other species of the genus by the laminar embolus with acute tip, the short additional subdistal projection of the embolus and the truncated RTA (Figs 11A–B, 13C–D).

Etymology

The specific name is derived from Latin *ibrida*, meaning a mongrel, specifically the offspring of a tame sow and a wild boar, and making reference to the similarity of the morphology to that of *Afroneutria velox* comb. nov. and *A. quadrimaculata* sp. nov.

Material examined

Holotype

TANZANIA: ♂, Kambai Forest Reserve, Muheza District, Tanga Region, 4°59' S, 38°41' E, ZMUC.

Fig. 10. *Afroneutria hybrida* sp. nov. Habitus, ♂. **A.** Dorsal view. **B.** Ventral view. Scale bars = 2 mm.

Paratype

TANZANIA: 1 ♂, same collection data as holotype, ZMUC.

Additional material

None.

Description (holotype)

Total length 12.40. Carapace 6.50 long and 5.50 wide. Eye diameter: AME 0.32, ALE 0.19, PME 0.60, PLE 0.56. Leg measurements: I: femur 9.70 / patella 3.20 / tibia 10.60 / metatarsus 11.40 / tarsus 4.70 / total 39.60; II: 8.70 / 3.10 / 8.90 / 9.50 / 3.50 / 33.70; III: 7.50 / 2.40 / 6.70 / 7.70 / 3.10 / 27.40; IV: 10.20 / 2.60 / 10.00 / 13.20 / 4.30 / 40.30. Leg formula 4123. Leg spination: tibia I and II v2-2-2-2-2, r1-1, p1-1; III and IV v2-2-2, r1-1, p1-1; metatarsus I, II and III v2-2-2, p1-1-1, r1-1-1; IV v1-1-1-1-1-2, r1-1-1, p1-1-1. Coloration: venter of abdomen black, with two white spots placed transversely behind epigastric

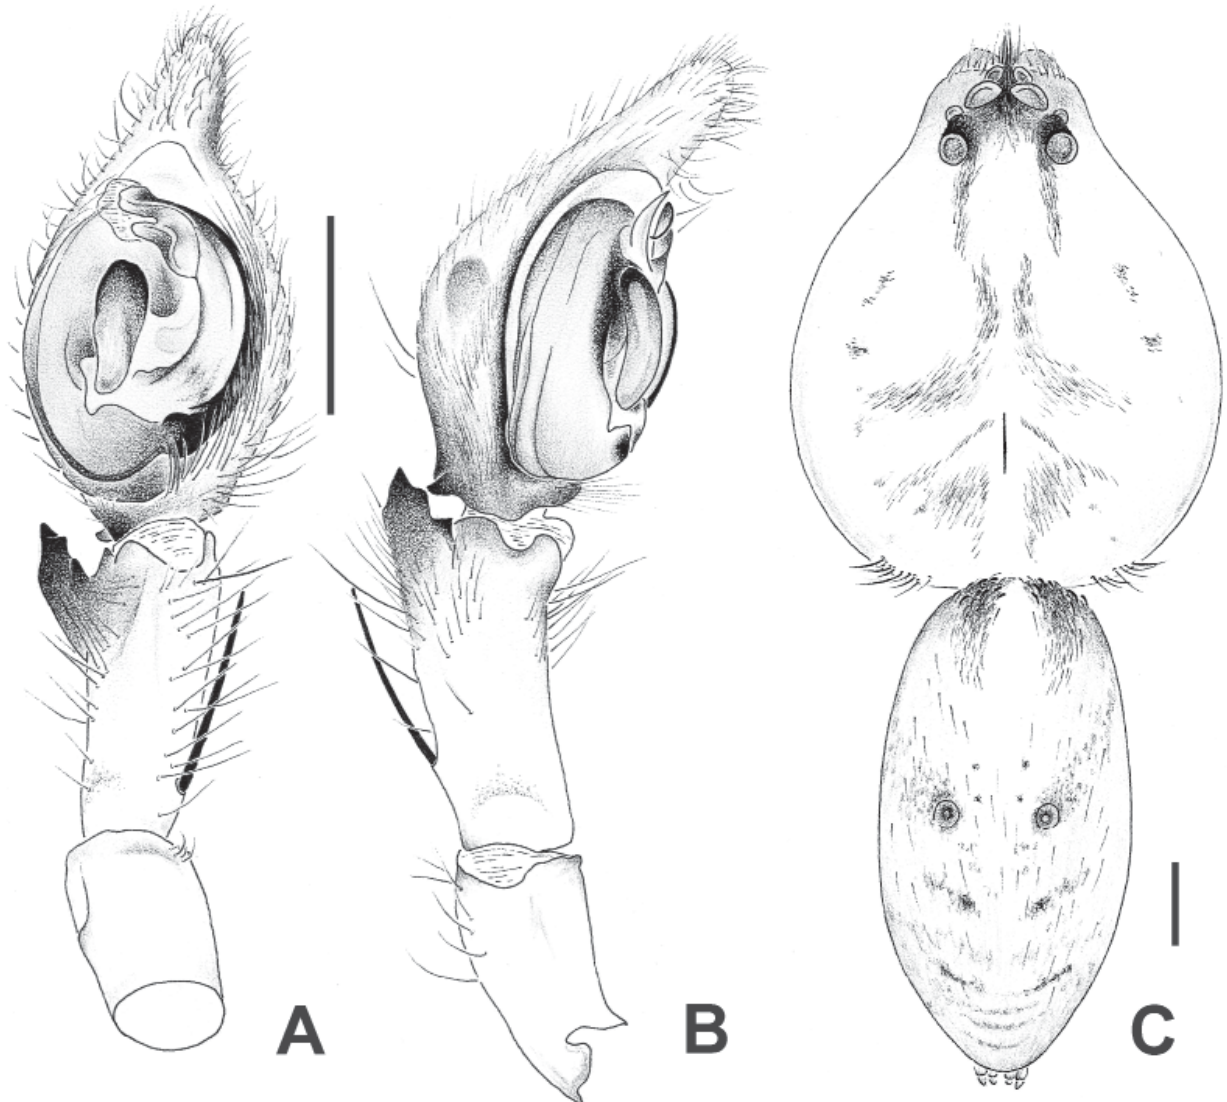

Fig. 11. *Afroneutria hybrida* sp. nov., ♂. **A.** Palp, ventral view. **B.** Palp, retrolateral view. **C.** Habitus, dorsal view. Scale bars = 1 mm.

furrow (Fig. 10B). Palp: cymbium elongated, longer than tibia; conductor oval; median apophysis straight (Figs 11A–B, 13C–D).

Distribution

Tanzania (Fig. 16B).

Fig. 12. Epigynum, ventral view. **A.** *Afroneutria immortalis* (Arts, 1912) comb. nov. **B.** *Afroneutria quadrimaculata* sp. nov. **C.** *Afroneutria erythrochelis* (Simon, 1876) comb. nov. **D.** *Afroneutria velox* (Blackwall, 1865) comb. nov. Scale bars = 1 mm.

Discussion

Afroneutria gen. nov. is proposed based on the results of the cladistic analysis presented in Polotow & Brescovit (2014). In that analysis, three of the species treated here were used: *Afroneutria erythrochelis* comb. nov., *A. immortalis* comb. nov. and *A. velox* comb. nov. The clade appeared as sister-group of a clade formed by *Ctenus sinuatipes* F.O. Pickard-Cambridge, 1897 and *C. curvipes* (Keyserling, 1881), both from Central America (Polotow & Brescovit 2014: fig. 3). The *Afroneutria* clade is supported by a unique elongated projection in the apical area of the embolus (Polotow & Brescovit 2014: character 25), also present in the species described here, *A. quadrimaculata* sp. nov. and *A. hybrida* sp. nov.

The Afrotropical region houses 123 species of Ctenidae, distributed in eight genera: *Africactenus* Hyatt, 1954, *Anahita* Karsch, 1879, *Apolania* Simon, 1898, *Caloctenus* Keyserling, 1877, *Ctenus* Walckenaer, 1805, *Petaloctenus* Jocqué & Steyn, 1997, *Thoriosia* Simon, 1910 and *Trogloctenus* Lessert, 1935 (Platnick 2015). *Viridasius* Simon, 1889 and *Vulsor* Simon, 1889 are excluded from the count, because they belong to another family according to Polotow *et al.* (in press). *Ctenus* contains the largest number of species (more than 70). The recent redescription of the Neotropical type species, *Ctenus dubius*, by Brescovit & Simó (2007) and cladistic analyses (Silva 2003; Polotow & Brescovit 2009) indicated that the genus is polyphyletic as currently delimited. Thus, the description of *Afroneutria* gen. nov. is helping to redefine Ctenidae and the polyphyletic *Ctenus* in the Afrotropical region.
